Certifications

Java (Basic) Certificate
C tutorial Course
JavaScript (Basic) Certificate
Complete BackEnd Development with Nodejs
React + Redux course

Honors-Awards

Hult Prize 2019 Photography Competition

Aniket Kumar Ghosh

Software Engineer 3 @NetApp | Node.js • TypeScript • NestJS
| Building AI-Integrated Backends & MCP Servers | Distributed Systems | Billing & Marketplace Systems
Greater Bengaluru Area

Summary

A back-charging script I built in vanilla JavaScript recovered approximately \$1M in lost revenue in a single quarter — and that's just one line on my resume. Over 4 years of full-stack and backend engineering, I've specialized almost entirely in the Node.js and TypeScript ecosystem — building microservices, REST APIs, event-driven systems, and cloud-native backends that run at scale. My stack runs deep: NestJS, Fastify, Express, Kafka, RabbitMQ, Redis, PostgreSQL, MySQL, MongoDB, and an extensive AWS footprint (Lambda, ECS, EKS, RDS, SQS, S3, DynamoDB, CloudWatch). At NetApp, I've worked across two products — BlueXP and Marketplace Control Tower. I designed and deployed an AI chat application end-to-end, leading a team of 4 engineers using NestJS, Next.js, and the OpenAI SDK. I built an MCP (Model Context Protocol) server in Node.js to give LLMs real-time access to production billing data. I've also written the kind of backend tooling that operations teams didn't know they needed until it cut their manual calculation time by 52%. Before NetApp, at Anchanto (Singapore), I integrated an OMS with 8+ marketplaces and carriers across Vietnam, UAE, Korea, and Thailand — shipping REST and SOAP integrations, improving scheduler performance by 28%, and supporting go-live for every project I touched. What makes my background a bit unusual: I think about backend systems the way a product engineer would. I'm not just wiring up APIs — I'm thinking about billing logic, revenue recovery, system reliability, and how an engineer four years from now will maintain what I'm building today. I've also shipped personal projects including a high-frequency auto-trading platform integrated with AngelOne, Zerodha, and Fyers using Node.js, Redis, and AWS ECS. I'm comfortable adapting to Go or Rust for the right role — but Node.js + TypeScript is where I operate at my best. Currently open to full-time full-stack or backend-heavy roles in India or internationally. If you're hiring for a team that cares

about clean architecture, business impact, and shipping things that actually work — feel free to message me directly.

Experience

NetApp

Software Engineer 3

July 2026 - Present (2 months)

Bengaluru

-> Designed the High-Level Architecture (HLD) and led a cross-functional team of 4 engineers to build and deploy an end-to-end AI chat application using NestJS, Next.js, and the OpenAI SDK.

-> Engineered a Node.js Model Context Protocol (MCP) server capable of querying production and analytics databases to allow LLMs to automatically isolate the root causes of charging anomalies.

-> Upgraded Kubernetes Helm charts and established automated Jenkins CI/CD pipelines to containerize and distribute core licensing microservices across disparate internal clusters.

- Core Engineering Member for the development and architecture design of the NetApp Marketplace Control Tower utilizing Go, Temporal, and Dynatrace.

NetApp BlueXP

MTS: Software Engineer II

September 2023 - July 2026 (2 years 11 months)

Bengaluru

-> Engineered a back-charging script in vanilla JavaScript that recovered approximately \$1M in lost revenue in Q1 FY24-25 by retroactively charging customers for uncharged durations — now used as a standard operational tool.

-> Built a revenue-loss calculation tool that reduced manual calculation effort across the entire team by 52% year-over-year, enabling per-customer overcharge and drop-charge analysis in seconds.

-> Developed a charging-alert investigation service that automatically traces charging errors to their root cause in production, reducing charging errors and production issues by 12%.

-> Implemented a billing-preference API (Node.js, Fastify) allowing customers to select their target marketplace subscription ID for billing, and integrated the tenancy-v4 service with the platform reporting tool to enrich SQL analytics data

Anchanto

Software Engineer

June 2022 - September 2023 (1 year 4 months)

Pune District

-> Integrated the Anchanto OMS with 8+ international marketplaces and carriers — including Haravan (Vietnam), Salla and Quipup (UAE), Shopee (Korea), Grabmart, and JD.com (Thailand) — via asynchronous REST and SOAP APIs, supporting go-live and UAT for all 8 integration projects.

-> Implemented retry logic, increased logging throughput, and restructured schedulers that collectively improved server performance by 28% — reducing failure rates and SLA breaches at scale.

-> Designed and maintained scalable backend architectures using the MERN stack with SQL and NoSQL databases, applying agile methodologies across cross-functional teams spanning Singapore and India.

Anchanto Services Pvt. Ltd, Singapore

Backend

January 2022 - August 2023 (1 year 8 months)

Implemented Retry-logics, increased logging throughput and improved schedulers which outpaced the server performance by 28%. Integrated Anchanto product service OMS with more than 8 marketplaces and carriers like Haravan (Vietnam), Quipup (UAE), Salla (UAE), Shopee (Korea), Grabmart, JD.com (Thailand) etc, via asynchronous REST/SOAP APIs/Plugins which increased the scalability and broadened the product's horizon and supported go-live and UAT projects for 8 different integration projects..

Anchanto Services Pvt. Ltd

Back End Developer

January 2022 - August 2023 (1 year 8 months)

Implemented Retry-logics, increased logging throughput and improved schedulers which outpaced the server performance by 28%. Integrated Anchanto product service OMS with more than 8 marketplaces and carriers like Haravan (Vietnam), Quipup (UAE), Salla (UAE), Shopee (Korea), Grabmart, JD.com (Thailand) etc, via asynchronous REST/SOAP APIs/Plug-

ins which increased the scalability and broadened the product's horizon and supported go-live and UAT projects for 8 different integration projects.

Anchanto

Software Engineer Intern

January 2022 - April 2022 (4 months)

Pune, Maharashtra, India

Education

Jadavpur University

Bachelor of Engineering - BE, Information Technology · (April 2018 - May 2022)
